Weld flow-line revealing agent

Weld flow-line revealing agent • Technical datasheet

Document: MC-DS-73-EN • Generated: 2026-11-14

The agent makes weld features visible for measurement of flow-line angles, fusion-line widths and heat-affected-zone dimensions. These observations can support process assessment and defect analysis. Applications include high-frequency welded pipe, argon-arc welds, laser welds and friction welds, with flow patterns used to inform review of welding conditions such as current, speed and pressure.
